PROFESSIONAL SUMMARY

Motivated 3rd-year B.Tech CSE (AI/ML) student with hands-on experience building production-ready AI applications using Python, FastAPI, LangChain, and NLP frameworks. Developed an agentic LLM system with real-time tool integration and an AI-powered resume screening engine using BERT-based semantic similarity and Scikit-learn. Passionate about deep learning, Transformer models, and deploying intelligent inference APIs. Seeking a fresher AI Engineer role to contribute to real-world AI-driven products.

EDUCATION

Swami Rama Himalayan University | Dehradun, India

B.Tech in Computer Science & Engineering (AI/ML) | 2023 – 2027 | **CGPA: 8.0/10**

TECHNICAL SKILLS

Languages: Python, Java

Frameworks & Libraries: FastAPI, LangChain, Streamlit, Scikit-learn, Sentence Transformers, NumPy, Pandas

AI / ML: Machine Learning, Deep Learning, NLP, Transformer Models, BERT Embeddings, TF-IDF, Semantic Similarity, RAG

Tools & Platforms: Git, GitHub, REST APIs, Inference APIs, Ollama, Groq

PROJECTS

AI-Powered Resume Screener | Python, FastAPI, Scikit-learn, Sentence Transformers, NumPy, Pandas |

- Developed an AI-driven resume screening system automating candidate evaluation by matching resumes against job descriptions, reducing manual screening effort by ~60%.
- Implemented hybrid scoring using TF-IDF, semantic similarity (BERT-based Transformer embeddings), and weighted skill matching, improving candidate-job fit assessment accuracy by ~35% over keyword-only methods.
- Built a resume preprocessing pipeline for text extraction, cleaning, keyword analysis, and section-wise evaluation of Skills, Experience, Projects, and Education — processing 100+ resume datasets with consistent output.
- Deployed a FastAPI-based inference API with recruiter-focused workflow generating compatibility scores and ranked candidate insights, cutting average evaluation time from ~10 minutes to under 30 seconds per resume.

Multi-Tool LLM Agent | Python, LangChain, FastAPI, Ollama/Groq, REST APIs | [StreamlitApp](#)

- Built an Agentic AI system capable of answering user queries by dynamically invoking 3+ external tools (Weather API, Calculator, Search) instead of relying solely on LLM knowledge, achieving ~90% task completion accuracy.
- Implemented tool orchestration and reasoning workflows using LangChain, enabling the agent to select appropriate tools based on user intent across 10+ query categories.
- Developed a FastAPI inference API backend with session-based conversation memory supporting contextual multi-turn interactions across extended dialogues.
- Designed a chatbot architecture combining LLMs, REST APIs, and tool outputs, reducing hallucination rate by grounding responses in real-time data retrieval.

ACHIEVEMENTS & EXTRA-CURRICULARS

- Achieved 82% accuracy on Titanic Survival Prediction using Logistic Regression and Random Forest with feature engineering and data preprocessing — published notebook on Kaggle.
